

OLD WORLD STYLE  
YOUR WINDOW AND DOOR GUIDE

From Italianate to French Eclectic, there’s one thing all Old World architectural types share—abundant charm. You’ll also find this characteristic in reliable JELD-WEN® windows and doors. They’re available in many styles inspired by Europe’s architectural heritage. For authenticity, they come with an ample selection of architecturally appropriate options. This selection includes various wood species, like solid pine AuraLast® wood, a JELD-WEN exclusive that’s guaranteed to resist wood decay and termites for 20 years. Regardless of the options you select, know that our windows and doors will remain beautifully reliable and durable—just as Old World artistry has endured throughout the ages.

WINDOWS: PREMIUM WOOD RADIUS AND GEOMETRIC

WINDOWS: PREMIUM WOOD RADIUS AND GEOMETRIC

Pricing tiers

At JELD-WEN we believe reliable craftsmanship should be available at any price. The graph below illustrates the general pricing tiers for each JELD-WEN® window and door collection. Some collections span more than one tier. In these cases, products in the more upscale tier indicate those with more options than those in the less expensive tier. For example, an IWP® Aurora™ Custom Fiberglass door with clavos, distressing and coordinating sidelights fits in the luxurious group, while a simple six-panel design might be in the midrange group. A Premium Vinyl window with simulated divided lites with an optional color and glass type will be in the midrange category, while a window in that collection without any options may be in the economy group.

Luxurious	Midrange	Economy
Custom Wood Windows and Patio Doors*		
	Premium Wood Windows and Patio Doors*	
	Premium Vinyl Windows and Patio Doors	
		Builders Clad-Wood Windows and Patio Doors*
		Builders Vinyl Windows and Patio Doors
IWP® Custom Wood Exterior and Interior Doors		
IWP® Aurora™ Custom Fiberglass Doors		
	Premium Wood Exterior and Interior Doors*	
	Fiberglass Entrance and Patio Doors	
	Custom Carved Interior Doors	
	Wood Composite Garage Doors	
		Molded and Flush Interior Doors
		Steel Exterior Doors

\*These collections include products made with AuraLast® wood.

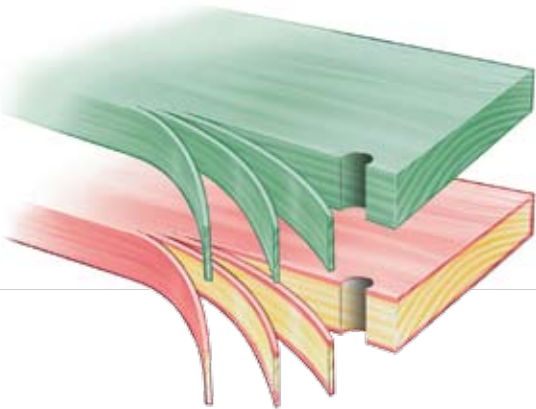

AuraLast® wood

We want to help your Old World home look beautiful year after year. That’s why our wood windows and select doors in pine are made from AuraLast wood, which provides superior protection against wood decay, water saturation and termites. We also offer solid pine AuraLast wood door frames for our Premium Wood, JELD-WEN Fiberglass and Steel exterior doors, as well as our Wood Composite garage doors.

Windows and doors with AuraLast wood are backed by a 20-year warranty; for information about the AuraLast wood door frame warranty, see your local dealer. Learn more at [www.jeld-wen.com/auralast](http://www.jeld-wen.com/auralast).

AuraLast wood (shown in green) provides virtually 100 percent penetration of the protective ingredients—from the surface to the core. In contrast, dip-treated wood (shown in red) is protected on the surface only, so its effectiveness will be compromised when the surface is broken during installation.

NOTE: Colors are used for illustration purposes only; AuraLast wood has a clear pine color.

JELD-WEN wood windows and doors made with AuraLast wood have earned the Good Housekeeping Seal.

Unmatched artistry is evident in Old World architecture—  
and the finest JELD-WEN® windows and doors.

*For details on the windows and doors featured in photography,  
see the foldout Product Guide on page 30.*

# Performance considerations

## Climate

Every climate has its own benefits and challenges, which is why it's a deciding factor in how much maintenance your windows and doors will require. We've provided the following chart to help you select appropriate products for your climate.

PRODUCT TYPE	OPTIMAL CLIMATE	MAINTENANCE LEVEL
<b>Wood windows and patio doors*</b>	Temperate climates	Moderate maintenance
<b>Metal-clad-wood windows and patio doors*</b>	Most climates	Minimal maintenance
<b>Vinyl windows and patio doors</b>	Any climate	Virtually no maintenance
<b>Wood exterior doors*</b>	Temperate climates (appropriate overhang required)	Moderate maintenance
<b>Fiberglass exterior doors</b>	Any climate (excellent for coastal and desert areas or in extreme conditions)	Virtually no maintenance
<b>Steel exterior doors</b>	Any climate	Minimal maintenance
<b>Wood Composite garage doors</b>	Any climate	Minimal maintenance

*\*JELD-WEN® wood windows and doors made from AuraLast® wood require less maintenance, which means they're appropriate for more climates. To learn more about AuraLast wood, see the foldout on page 3.*

## Energy efficiency

All JELD-WEN® wood, metal-clad-wood and vinyl windows and patio doors and steel or fiberglass patio doors come standard with energy efficient Low-E glass. This glass helps you save money on your heating and cooling bills and reduces fading due to UV exposure. Low-E glass is also an affordable option for JELD-WEN Premium Wood exterior doors. With the proper glass options, your JELD-WEN windows and doors\*\* will meet ENERGY STAR® requirements. JELD-WEN has been an ENERGY STAR partner since 1998.

*\*\*A door system includes a door slab, frame and hardware;  
all these components must be qualified for an ENERGY STAR rating.*

In warm weather, Low-E glass reflects the sun's energy and prevents it from entering the home.

### Exposures: windows and patio doors

The placement of windows and patio doors on certain walls can determine the kind of natural light that enters into your home, or even the temperature inside your home. South- and east-facing windows bring in bright, golden light. North-facing windows usher in cooler, muted light. And west-facing windows let in abundant direct sunlight, as well as the beauty of sunsets. Consider that windows on south-, southwest-, southeast- or west-facing walls may be more susceptible to heat gain.

### Exposures: exterior doors

If you select a wood exterior door, it's imperative to consider exposure. To adequately protect the door and extend its life, you'll have to take into account your climate and the direction the door will be facing. Then you must determine the amount of overhang needed to protect the door from the elements, which can be obtained by following a simple formula:  $Y=1/2X$  (in most cases). For example, if the measurement from the base of your door to the bottom of your overhang is ten feet, then the overhang should be a minimum of five feet deep.

*X = Distance from bottom of door to base of overhang.*

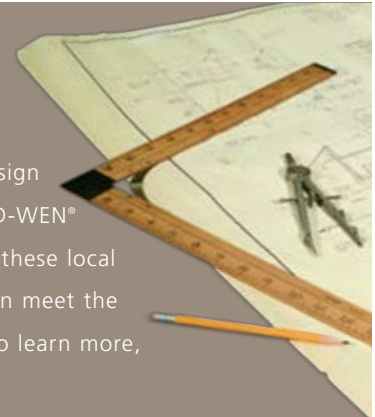

*Y = Amount of overhang protection required.*

In cold weather, Low-E glass reduces the amount of heat lost by reflecting it back inside.

### Building codes

Building codes are published ordinances that will regulate many aspects of your project, such as design loads, opening widths and material selection. JELD-WEN® windows and doors are designed and tested with these local building codes in mind. Many of our products even meet the toughest standards for hurricane-prone regions. To learn more, visit [www.jeld-wen.com/resources](http://www.jeld-wen.com/resources).
